

NOEL UGWOKE

AI & Software Engineer

Calgary, AB • Email • 306-490-2929

SUMMARY

Senior Software Engineer with experience building AI-enabled platforms, backend services, and cloud-native applications from scratch. Strong background in Python, FastAPI, TypeScript, SQL, REST APIs, workflow automation, and cloud infrastructure across Azure and AWS. Experienced in designing scalable internal tools, integrating data systems, and shipping production-ready solutions with CI/CD, observability, and cross-functional ownership.

CORE COMPETENCIES

- **Languages & Frameworks:** Python, Java, C#, .NET, Go, Ruby, JavaScript, TypeScript
- **Backend & APIs:** FastAPI, Flask, Node.js, REST APIs, GraphQL
- **AI Platforms:** LangChain, Haystack, LLM application workflows, AI-enabled automation
- **Data Processing:** Pandas, NumPy, PySpark, ETL pipelines
- **Cloud & DevOps:** AWS (EC2, S3, RDS, DynamoDB), Azure, GCP (Vertex AI), Docker, Kubernetes, CloudFormation
- **Databases:** PostgreSQL, MySQL, Oracle, MongoDB
- **Automation:** Build/deploy workflows and data tasks using Python, prompt-driven systems, workflow orchestration
- **Tools & Collaboration:** Agile/Scrum, Jenkins, CircleCI, Jira, Confluence

PROFESSIONAL EXPERIENCE

Senior Backend Engineer (Cloud & Platform) - Improving

Dec 2025 - Present

- Architected and shipped backend/platform enhancements for a Snowflake-to-Looker Studio connector, enabling governed semantic data access without custom SQL and improving self-serve analytics workflows.
- Built metadata discovery, schema translation, and query-generation flows for platform integrations, improving feature flexibility and reducing manual setup effort by 12%.
- Designed validation, auth-aware integration paths, and rollout-ready platform behavior for complex cloud-connected workflows, improving reliability and reducing failure cases by 5%.
- Worked directly with stakeholders to translate ambiguous product requirements into production-ready backend capabilities, technical docs, and preview releases under tight timelines.

Senior Backend Engineer (Data) - Qindred, Contractor

Feb 2025 - Nov 2025

- Developed automated workflows using Azure Data Services and REST APIs, reducing manual data processing time by ~25% and improving application scalability.
- Designed and rolled out observability standards for logging and dashboards, giving teams clear visibility into service health and accelerating incident triage.
- Collaborated with PMs to develop interactive dashboards (Power BI) to surface key operational metrics, enabling leadership to monitor performance trends and make data-driven decisions faster.

Software Developer - APEGA

Dec 2022 - Dec 2024

- Architected and delivered scalable API-driven integrations, automating regulatory workflows reducing manual application processing.
- Reengineered data pipelines to increase throughput by 30%, ensuring high data integrity for compliance audits.
- Led cross-functional Agile teams, translating business requirements into robust technical solutions.

Developer - Spartan Controls

Jul 2021 - Nov 2022

- Engineered responsive React and JavaScript front-ends for IoT and operations dashboards, improving user engagement and raising accessibility scores by 20%.
- Maintained .NET (C#) and SQL backend services behind critical business tools, sustaining 99.9% uptime.
- Deployed AWS (Lambda, EC2) infrastructure and automated Jenkins CI/CD pipelines with Docker and Kubernetes, cutting deployment time by 15%.
- Led sprint planning and code reviews across 15+ Agile sprints, delivering features on schedule with cross-team coordination.

Cloud Developer / Data Analyst - Parkland Fuel Corporation

May 2020 - Jan 2021

- Built Python (Pandas, NumPy) and SQL analysis pipelines on cloud-hosted data, surfacing trends that informed 15+ strategic marketing and logistics decisions.
- Developed machine learning models to forecast customer behaviour, contributing to a 22% lift in marketing campaign ROI.
- Created Tableau and Power BI dashboards unifying 5+ data sources into a single view, reducing stakeholder reporting time by 10%.

Web Applications Developer - Alberta Health Services

Feb 2019 - Apr 2020

- Developed a secure appointment and booking web application in React, TypeScript, and Node.js, handling 500+ daily bookings for clinical staff and the public.
- Deployed serverless backend services on AWS (Lambda, S3, DynamoDB), achieving 99.9% uptime for a public-facing healthcare workflow.
- Implemented Jest unit tests and CI/CD pipelines, reducing post-launch defects by 20% and shortening release cycles.

PROJECT

- **AI-Powered Family Tree Automation Platform (Qindred):** Built an AI-enabled platform using Python, GPT-4, Claude and workflow automation to ingest family data, interpret relationships, assist with automated family tree construction, and streamline member/invitation workflows, reducing manual setup effort by 40%.

EDUCATION & CERTIFICATIONS

B.Sc. in Computer Science

University of Calgary - May 2022

- AWS Certified Solutions Architect - Associate
- Certified Google Cloud Developer
